Response to Arguments

Applicant's arguments, see the paragraph numbered 2, filed 03 June 2005, with respect to the rejection(s) of claim(s) 1-3 and 6-9 under 35 U.S.C. §103(a) have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of Applicants' application no. 10/656,368 (United States Patent Application Publication No. 2005/0025621).

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claim 1 is provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claim 3 of copending Application No. 10/656,368. Although the conflicting claims are not identical, they are not patentably distinct from each other because the pending claim differs only by functional language, which is inherent in the co-pending invention.

The copending application claim 3 requires a casing having an air outlet, a side outlet, a base mounted in the outlet with an impeller having a plurality of blades mounted on the base, and guiding plates. The pending claim 1 requires a casing with an air outlet, an auxiliary air outlet, a base mounted in the outlet with a fan wheel having a plurality of blades mounted on the base, and guiding members, "wherein when the wheel rotates, the guiding members deflect airflow in at least two airflow directions, including at least a first airflow direction at the air outlet and at least a second airflow direction at the auxiliary air outlet." The co-pending application does not include the aforementioned functional language, but it is inherent to one having ordinary skill in the art that during rotation of the co-pending application impeller, the flow of air exits the casing through the outlet 12 and the side outlet 101. Therefore, the pending claim 1 is not patentably distinguished over the co-pending claim 3.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

Allowable Subject Matter

Claims 2-11 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
